Use-Case Specification: Customer pays by card

1. Customer pays by card

1.1 Brief Description

Customer arrives at the checkout counter with DVD(s) to be rented. The cashier uses the system to record the transaction. The customer wants to pay by card (debit or credit). The cashier gives the customer the credit card machine and customer enters their credit/debit card information. The system sends authorization request and payment approval request. After receiving authorization and payment approval, system records the card payment along with payment approval. The transaction is successful and the customer paid for the rented DVD(s).
